I N D E X

Attention is called to the sequence of data in this bulletin. All crops on which official estimates of acreages and production are carried are inserted in alphabetical order. Where there is more than one season given the order is as follows: All, fall, winter, and spring. Each crop carries the following sequence of data by season: Name of crop - Season; Acres harvested, by Counties, 1941-42 to 1947-48; Acreage, production and value, State summary, 1938-39 to 1947-48; Acreage and production by counties and areas, 1947-48; Shipping data; Per acre costs and returns. The latter is all or in part on colored paper; each major crop is separated by colored paper.

BEANS, LIMA:	All, Winter and Spring.	1 - 3
	Shipments, by origin, monthly, in mixed cars and trucks . . .	14 - 16
	Costs and Returns per Acre.	4
BEANS, SNAP:	All, Fall, Winter and Spring.	5 - 13

F O R E W O R D

The Florida Crop and Livestock Reporting Service functioning as the field unit of Agricultural Estimates of the Bureau of Agricultural Economics, United States Department of Agriculture in cooperation with the Department of Economics, Agricultural Experiment Stations, University of Florida herein submits its fourth annual summary of vegetable statistics.

It is to be assumed that every farmer is interested in the welfare of the agriculture of the Nation, and that of his State, county, and local community. It is only natural for each grower to be vitally interested in his own prosperity. It is necessary for others to prosper that one may prosper for the old theory of "ketch'em and skin'em" is very much out of date. The theory of "live and let live" is far more commendable and enduring. The only sound basis for agriculture is for all parties concerned to be interested in the common welfare and to keep themselves well informed so that each individual can intelligently make his own decisions as to his own private business and give his best judgment and influence when called upon to act in behalf of the public.

This compilation of "Government" reports can be said to be the summation of individual reports from hundreds, even thousands, of producers and other well informed sources. In order that the agriculture of the State and the Nation may operate efficiently and successfully, it is necessary that the farmers, the people who do business with farmers, and the Government be constantly informed with up-to-date facts about present and prospective supplies of farm products and about the income and purchasing power of farmers as well as many other fundamental factors affecting farm prosperity.

Cooperative relationships between Federal and State agencies tend to eliminate duplication in the collection and publication of agricultural statistics and make it possible to provide better local reports such as the county and area estimates contained in this bulletin. Timely local releases and digests which are of particular interest and importance to growers and those serving particular areas and segments of the industry can be more readily provided. Some of those using crop reports and agricultural statistics are individual farmers who need unbiased and up-to-date reports which enable them to help themselves; legislators and administrators in local, State, and National governments who use them as a basis for constructive public programs for farmers; for those concerned with our foreign trade policies; State agricultural colleges, extension services, State departments of agriculture; economists use them in preparing Outlook and Situation reports; agricultural research workers in industry, State experiment stations, etc; farmers organizations and cooperatives; civic and state organizations; banks, insurance and credit organizations; railroads and other transport services, and many others who are an important part of the vast network that plays a part in getting the production of the soil to the consumer in its best condition.

The farmer, being a rugged individualist, is expected to fight the hardest to preserve our individual freedoms. Those of us in agriculture recognize that the best way to help the farmer preserve those freedoms is to help him to help himself. Part of this help will be to keep him, and those who serve him, well informed. In order for us to do a good job of this we must receive the fullest possible cooperation from him in the form of regular and accurate statements concerning his crops, livestock and other farming operations.

Estimates are based on historical facts and opinions together with current facts and opinions. This bulletin is made up of historic facts of commercial vegetable production corrected and revised according to the best information and data available. It is respectfully submitted to the best use of agriculture in the State of Florida.

ACKNOWLEDGEMENTS

The data contained in this report, except shipment information, are estimates and are based on reports by, and interviews with, growers, shippers, marketing associations, seedsmen, county agricultural agents, railroad representatives, canners, and processors, the Federal-State Inspection and Market News Services, the Florida State Marketing Bureau, the Florida State Marketing Board and its managers, the Production and Marketing Administration, and other well informed sources. We would like to take this occasion to gratefully acknowledge our indebtedness to each person and organization who has contributed to the development of these data. Their cooperation makes these reports possible.

DEFINITIONS AND EXPLANATIONS

SEASONAL GROUPINGS

In order that competitive production within the State of Florida and the United States may be classified on a National basis under reasonably uniform groups, we have established a National pattern which is based on most active harvesting periods. These major groups are WINTER, SPRING, SUMMER, and FALL. The WINTER group includes the months of January, February, and March; SPRING includes April, May, and June; SUMMER includes July, August, and September; and FALL includes October, November, and December. These periods are not rigidly fixed and the harvesting period for a particular grouping may extend over into the preceding or following group. However, in arranging our data we have followed these groupings in so far as it is practical. It can be readily seen that some systematic order of grouping is necessary for comparative purposes and, while they may not always agree with some local designations now in use, it is best for all concerned to handle our classifications on a National basis.

PLANTED ACREAGE

Estimates of planted acres for any seasonal group consist of acres for harvest (see below) during that particular seasonal group plus any acreage planted for harvest during the season, but which was lost or destroyed and did not produce a crop in the season under consideration. This definition is based on a "loss of crop" concept. If the acreage is lost and not replanted it is counted as planted. If it is lost but replanted for harvest in the same season as the original acreage would have been harvested, the acreage replanted is not considered as additional acreage planted. But, if the acreage lost is replanted for harvest in a later season, it is considered as planted for both seasons and as acres for harvest only for the later season.

ACRES HARVESTED OR FOR HARVEST

Acres harvested or for harvest is considered as being all acreage from which a crop could have been harvested had economic conditions (prices, available labor, etc.) warranted the harvest. This includes mature acreage on which the harvest was postponed or delayed too long due to economic reasons and the production lost thereby. Acreage which produces such low yields or poor quality that the crop is not worth picking at any reasonable price is considered as crop failure and is not included in the acreage for harvest. Unharvested acreage which produces yields which would be harvested at reasonable prices is included in acreage for harvest.

ECONOMIC ABANDONMENT

This category includes mature production not harvested because of economic factors, such as low prices, shortage of labor, etc. Such loss of production includes quantities left in fields partially harvested as well as production on acreage abandoned for economic reasons. Acreage abandoned at any stage of growth before maturity will be considered as loss of acreage or crop failure rather than economic abandonment of production.

YIELD

Yield refers to total production of merchantable quality produced on an acre basis and may include some unharvested production left in fields for economic reasons.

PRODUCTION

Total production represents the yield times (X) the acres harvested or for harvest. Production of value is that part of the production which was harvested and sold or utilized while in the fresh state and does not include economic abandonment.

UNIT VALUE OR PRICE

All of the prices used in this report are on an F.O.B. basis or its equivalent, less selling charges. In the case of some commodities which are sold in units other than the one listed, these units are converted into the equivalent of the ones used.

TOTAL VALUE

The total value is the price per unit times (X) the production of value.

CANNED OR PROCESSED ACREAGE AND PRODUCTION

The acreage of vegetables in Florida planted solely for canning and processing purposes during the period covered by this publication has been insignificant. The acreages of beans and tomatoes, the principal crops canned, are planted primarily for fresh market but during recent years substantial quantities have been canned. In order to conform to the National pattern for recording the fresh and processed production, we have shown the equivalent acreage on which this processed production would have been grown and listed the remainder as acreage grown for fresh market production.

COSTS AND RETURNS PER ACRE IN SELECTED AREAS IN FLORIDA

These tables represent the summarization of grower records or estimates of costs and returns per acre from several vegetable crops in the major producing areas of Florida for the 1947-48 season as compiled by the Florida Agricultural Experiment Stations. Both costs and returns are computed on the basis of acreage harvested and weather losses or economic abandonment have not been considered. In so far as possible, growing and harvesting costs have been separated and labor items excluded from costs of materials.

EGGPLANT: COSTS AND RETURNS PER ACRE IN SELECTED AREAS IN FLORIDA, SEASON 1947-48.

(The figures shown below are compiled by the Florida Agricultural Experiment Stations. They are based on grower records and estimates and are averages of the samples shown.)

Item	Fort Myers	LaCrosse
Number of growers	5	7
Number of acres	60.0	19.5
Average acres per grower	12.0	2.8
Average yield per acre (bushels)	451.0	200.3
 <u>Growing costs:</u>		<u>Average per acre</u>
Land rent	\$ 38.45	\$ 6.43
Seed and seedbed	17.30	17.91
Fertilizer and side dressing	118.04	31.93
Spray and dust	18.94	2.85 ^{1/}
Cultural labor	99.14	32.86
Machine hire	4.74 ^{2/}	.71 ^{2/}
Mule feed	4.17 ^{3/}	5.71
Gas, oil and grease	14.67	5.08
Repair and maintenance	11.01	3.39
Depreciation	17.12	5.17
Taxes, licenses and insurance	2.68	.54
Interest on production capital (6% - 5 mos.)	8.26	2.68
Interest on capital invested (other than land)	2.14	.65
Miscellaneous expense	1.20 ^{4/}	
 Total growing cost	\$ 357.86	\$ 115.91
 <u>Harvesting costs:</u>		
Picking labor	\$ 98.39	\$ 23.71
Grade and pack labor	80.33	15.25 ^{5/}
Containers and paper	170.32	56.18 ^{6/}
Hauling	29.88	20.03
Commission	65.57	20.03
 Total harvesting cost	\$ 444.49	\$ 135.20
 Total crop cost	\$ 802.35	\$ 251.11
Crop sales	\$ 831.45	\$ 179.93
Net return	\$ 29.10	\$ -71.18

^{1/} Reported by 6 growers averaging \$3.32 per acre.

^{2/} Reported by 3 and 1 growers averaging \$7.90 and \$5.00 per acre, respectively.

^{3/} Reported by 1 grower at \$20.83 per acre.

^{4/} Reported by 1 grower at \$6.00 per acre.

^{5/} Reported by 3 growers averaging \$35.58 per acre.

^{6/} Reported by 4 growers averaging \$98.33 per acre.
